Our chemistry department is doing some of the most impactful research at the university and around the world. The department’s 21 regular research faculty comprise one of the highest external research grant-generating departments at S&T. Our emphasis on excellence in research and creativity has moved our programs to the forefront of science. The department supports a broad range of research performed by internationally recognized faculty competing at the leading edge of technological research.

The department provides programs in analytical, inorganic, organic, physical, and biochemistry, as well as in more specialized areas including polymer and coatings, electrochemistry, bioanalytical chemistry, cancer biology, colloids, corrosion, environmental chemistry, kinetics, organometallic chemistry, reaction mechanisms, atmospheric sciences, solid state chemistry, chemical instrumentation design and development, spectroscopy and theoretical chemistry. A number of our faculty are involved in efforts which have been organized into several centers or institutes including the Missouri S&T Coatings Institute, the Materials Research Center, the Cloud and Aerosol Sciences Laboratory and the Center for Single Nanoparticle, Single Cell, and Single Molecule Monitoring. Financial support is available from research grants for advanced students.

The department of chemistry, along with the department of biological sciences, is housed in Schrenk Hall complete with modern research, teaching and computer laboratories. The department has a number of support personnel to provide technical assistance with laboratory instrumentation, computers, laboratory hardware, and glassware. State-of-the-art research instrumentation in the department of chemistry includes a Nicolet Nexus 470 FT-IR FTIR, Varian INOVA 400 MHz FT/NMR spectrometer with multinuclear liquid, diffusion, and variable-temperature capabilities, Bruker 200 MHz FT/NMR with multinuclear liquid and toroidal cavity capabilities, Beckman DU 640B and Carey 50 UV-Visible spectrophotometers, Hewlett-Packard 5989A Mass Spectrometer (GC/MS & DIP/MS inputs), Hitachi LaChrom Elite D-2000 HPLC with Diode Array & Refractive Index detectors, PerkinElmer 2380 Atomic Absorption spectrometer, Bruker-AXS D8 Single-crystal X-ray Diffractometer, Beckman PACE/MDQ capillary-electrophoresis, Shimadzu HPLC/GPC, EG&G potentiostat/galvanostats, TA Instruments Q2000 Differential Scanning Calorimeter, TA Instruments Q50 Thermogravimetric Analyzer, NexION 300 ICP-MS, and AB SCIEX 4000 QTRAP mass spectrometer, Tecnai F20 TEM, S-570 SEM, PerkinElmer 2400 Elemental Analysis (C-H-N), PerkinElmer LS 30 Fluorescence spectrophotometer, Hewlett Packard 5890 series II Gas Chromatographs, Electrothermal Engineering Ltd. M-2341 Melting Point apparatus, Sartorius ME-5 series Ultra Micro Balance, Dymax Model 5000 UV Curing Oven, CEM MDS-2000 Microwave Reactor Oven, Nicolet Magna-IR 750, Bruker-AXS D8 Single-crystal X-ray Diffractometer, Hitachi M-8000 mass spectrometer, EG&G low-temperature Mössbauer spectrometer, Applied Color Systems 1800 color-matching/formulating computing spectrophotometer, PerkinElmer, Par 272, Rame-Hart 250-F1 Goniometer/Tensiometer, Full-Spectrum Laser MLE-40 Laser Cutter, Netzsch LFA447 Flash Diffusivity Analyzer, TA Instruments AR2000 Rheometer with Small-Angle Light Scattering attachment, TA Instruments Q800 Dynamic Mechanical Analyzer, and Applied Separations Helix Super-Critical Fluid Processor. The department houses an extensive collection of additional mass spectrometers, a wide variety of additional chromatographs (GC, LC, IC), infrared spectrometers, dispersive optical spectrometers (UV/VIS, IR, AA), fluorescence/luminescence spectrophotometers, centrifugal partition chromatographs, refrigerated-ultra centrifuges, calorimeters, salt-spray chambers, and radiation counters, as well as access to the campus centralized computing facility which includes numerically-intensive computing support. Neutron diffraction is on hand at the High Flux Reactor of the Missouri S&T. This also supports nuclear chemistry. Facilities for studying very fast combustions and explosions, as well as a variety of new and innovative techniques for characterizing high-energy materials, are provided in the Rock Mechanics and Explosives Research Center.

Amitava Choudhury, Associate Professor
PHD Indian Institute of Science, Bangalore
Solid state chemistry; Synthesis of polyanion-based materials, complex chalcogenides, porous materials (MOFs, organically templated solids, and zeolites); X-ray crystallography including single-crystal and powder X-ray diffraction (laboratory and synchrotron); Solid state electrochemistry (lithium- and sodium-ion batteries, solid electrolytes); Magnetic, electronic and thermoelectric properties.

Richard Dawes, Professor
PHD University of Manitoba, Canada
Spectroscopy and dynamics of small molecules primarily of interest to combustion and atmospheric chemistry.

Nuran Ercal, Professor
PHD Hacettepe University, Turkey
Vitek Chair of Biochemistry. Effects of N-acetylcysteineamide (NACA) in various oxidative stress related conditions, including metal toxicity, radiation, medicinal drug- induced toxicity, and degenerative eye disorders; Developing NACA eye drops as an alternative to surgery for oxidative stress-induced eye disorders; Developing HPLC techniques for thiol-containing compounds in biological samples.

Rainer Glaser, Professor and Chair
PHD University of California, Berkeley
CO2 capture from air: Rubisco-inspired oligopeptide-based reversible CO2 capture systems; Oscillating chemical reactions: Video-based kinetic analysis and complete simulation of complex reaction systems; Organic crystalline ferroelectric materials for nonlinear optics; Ethical science: Peer review ethics, science communication, cross-disciplinary science education, and globalization.

Garry Smitty Grubbs II, Associate Professor
PHD University of North Texas
Physical chemistry in the area of molecular rotational spectroscopy and gas phase chemistry; Development of spectroscopic tools for the detection of chirality, structural determination of van der Waals complexes, observation and molecular determination of actinide-containing species, and as a basis for determination of molecules in the interstellar medium; Chemistry education research aimed at delivering undergraduate level physical chemistry teaching laboratories that integrate thermodynamics, statistical mechanics, kinetics, and quantum chemistry on a budget.
Wenyen Liu, Assistant Research Professor
PHD New York University
Design of programmable soft materials with tailored functions; development of analytical strategies using advanced instruments (e.g., AFM, TEM, Cyro-EM, SEM, SAXS, DLS, TOC, ICP-MS, ICP-OES, GFAA, IC, HPLC, GC-ECD/FID, GC-MS, LC-MS/MS, and fluorescence spectroscopy) for applications in environmental chemistry, human health and life science et al.; Fabrication of electrochemical biosensors for medical diagnosis; Nanoparticle analysis for aerospace combustion and environmental contamination.

Vadym Mochalin, Associate Professor
PHD National Academy of Sciences of Ukraine
Fundamental chemistry and physics, synthesis, characterization, purification, chemical modification, computational modeling, and development of 2D and 0D materials: nanodiamond, MXenes, nanoonions, nanocarbons, and other materials for applications in composites, energy storage, biology and medicine, optoelectronics, sensing, and extreme environments.

Paul Ki-souk Nam, Associate Professor
PHD University of Missouri-Columbia
Biofuel and bioproduct development; Microalgae and agricultural product utilization; Environmental monitoring and remediation: endocrine disruptors, emerging contaminants, aerosol/particle matter, carbon sequestration; Supercritical fluid reaction, extraction and chromatography; Explosive and chemical agent detection and neutralization; Synthesis and characterization of enantiomer-enriched peptides and oligomers; Thermal treatment for material characterization and recycling.

Manashi Nath, Associate Professor
PHD Indian Institute of Science
Growth of functional nanowires and nanotubes of inorganic materials for energy conversion and storage, biosensor, and superconducting applications; Developing protocols for device fabrication with functional nanowire and nanotube arrays.

V Prakash Reddy, Professor
PHD Case Western Reserve University
Organic, physical organic, and bioorganic chemistry; Synthetic organic chemistry; Organic and bioorganic reaction mechanisms; Organofluorine chemistry; Green chemistry; Nonaqueous electrolytes for lithium ion batteries; Protein modifications; Oxidative stress; Supercarids; Carbocycles; Therapeutics for Alzheimer’s disease and other neurological disorders; and AGE-inhibitors and -breakers in health and disease.

Thomas Schuman, Professor
PHD University of Alabama-Huntsville
Interface control; Non-chrome, corrosion inhibitors for aluminum alloys and steel; Adhesion promotion to plastic substrates; Organometallic nanocomposites; Development of industrial agricultural products/materials; Polymer gels for EOR applications; Transportation-infrastructure sustainability materials.

Honglan Shi, Research Professor
PHD Missouri S&T
Environmental analysis and bioanalytical techniques, including emerging water contaminants, soil contaminants; Bioanalytical analysis, analytical instrument and test kits designs; Analytical methods development for state-of-the-art instruments including LC-MS, GC-MS, ICP-MS, ICP-OES, HPCE, HPLC, GC, and IC.

Chariklia Sotiriou-Leventis, Professor
PHD Michigan State University
Synthesis of nanomaterials based on aerogels: polyisocyanurate aerogels as shape memory polymers for deployable panels and biomimetic applications; Microporous carbons from phenolic aerogels as sorbent materials with exceptionally high CO2 adsorption; Nanoporous metals, carbides, nitrides, borides; Supramolecular chemistry.

Pericles Stavropoulos, Associate Professor
PHD Imperial College, London, UK
Development of transition-metal catalysts for applications in C–H bond activation and atom/group-transfer chemistry.

Jay A Switzer, Curators Distinguished Professor
PHD Wayne State University
Inorganic materials chemistry; Electrochemistry; Photoelectrochemistry; Electrocatalysis; Chiral surfaces; Epitaxial growth of thin films and nanostructures; Energy conversion and storage.

Risheng Wang, Associate Professor
PHD New York University
Biochemistry; Structural DNA nanotechnology; Nanomaterials; Fabrication and characterization of nanostructures; DNA based biomedical and electronic applications.

Philip D Whitefield, Chancellor’s Professor
PHD University of London, London, UK
Aerospace emissions; Chemical and physical characterization of aerosols; Aerosols generated by aerospace and other civilian and military activities; Environmental problems presented by aerosol production (e.g. local air quality at airports, rocket impact on stratospheric ozone) and their impact on power plant efficiency (e.g. evaluation of fuel additives).

Jeffrey G. Winiarz, Associate Professor
PHD SUNY at Buffalo
Development of polymeric photonic materials and devices using photosensitization by way of the inclusion of surface-passivated semiconductor nanocrystals.

Klaus Woelk, Associate Professor
PHD University of Bonn, Germany
In situ high-temperature and high-pressure NMR spectroscopy to study the chemistry of thermoplastics upcycling and the hydrothermal degradation of lignocellulosic biomass; NMR relaxometry and diffusimetry to investigate fluid mobility in inhomogeneous and porous materials; Spin-spin (T2) and spin-lattice (T1) relaxation of hyperpolarized NMR spin states; toroid-cavity rotating-frame NMR microscopy.

CHEM 5000 Special Problems (IND 0.0-6.0)
Problems or readings on specific subjects or projects in the department. Prerequisite: Preceded or accompanied by Chem 1100 or an equivalent training program approved by S&T. Consent of instructor required.

CHEM 5001 Special Topics (LEC 1.0 and LAB 2.0)
This course is designed to give the department an opportunity to test a new course. Variable title.
CHEM 5099 Master Research (IND 0.0-6.0)
Master level research with the intent to lead to the preparation of a master degree thesis. Not more than six (6) credit hours allowed for graduate credit. Subject and credit to be arranged with the instructor. Preparation of a written, detailed report culminating in a thesis is required of the student. Prerequisite: Must meet departmental training requirements for laboratory safety. Consent of instructor required.

CHEM 5100 Laboratory Safety & Hazardous Materials (LEC 1.0)
A systematic study of safe laboratory operations and pertinent regulations of state and federal agencies. Prerequisites: Graduate standing.

CHEM 5210 Fundamentals of Synthetic Organic Reactions (LEC 3.0)
Fundamental organic reactions are discussed based on reaction mechanisms and synthetic applications emphasizing the synthesis approach. Graduate students are required to demonstrate a higher level of learning on assessments. Prerequisite: Chem 2220.

CHEM 5220 Synthetic Organic Chemistry (LEC 3.0)
A systematic study of organic reactions, their mechanisms and synthetic applications. Graduate students are expected to demonstrate a higher level of proficiency during assessments. Prerequisite: Chem 2220.

CHEM 5310 Introduction to Inorganic Chemistry (LEC 3.0)
A study of inorganic chemistry with emphasis on physical methods. General subjects covered include: molecular structure, bonding, complexes, spectroscopy, and reaction rates. Graduate students are required to demonstrate a higher level of proficiency during assessments.

CHEM 5410 Advanced Chemical Thermodynamics (LEC 3.0)
A study of the laws of thermodynamics with application to chemical systems. Emphasis is placed on partial molal functions. Credit will not given for both Chem 5410 and Chem 4410. Prerequisites: Chem 3420.

CHEM 5420 Elemental Quantum Chemistry (LEC 3.0)
A study of molecular structures and spectroscopy, statistical thermodynamics, kinetic theory, chemical kinetics, crystals, and liquids. Prerequisites: Math 2222; Physics 2135 or Physics 2111.

CHEM 5430 Advanced Chemical Kinetics (LEC 3.0)
Introductory graduate treatment of special topics of physical chemistry including statistical mechanics and kinetics. Prerequisites: Chem 3420.

CHEM 5460 Molecular Engineering of Materials (LEC 3.0)
This course focuses on the fundamentals of molecular engineering with an emphasis on their applications including renewable/clean energy solutions, energy storage, air/water cleaning, and optoelectronics. Topics include principles of modern physics, carbon chemistry, macromolecules, metal(covalent)-organic frameworks sol-gel processing and crystal growth. Prerequisites: Senior Standing or consent of instructor. (Co-listed with MS&E 5460).

CHEM 5510 Introduction to Chemical Analysis (LEC 3.0 and LAB 1.0)
Principles and analytical applications of molecular spectroscopy, chromatographic separations, mass spectrometry, and radiochemistry. A brief overview of instrument electronics, signal generation and processing, and automated analysis is also provided. Graduate students are expected to achieve a higher level of proficiency on application and assessments compared to Chem 4510 students. Prerequisites: Chem 1100, Chem 2510, Chem 2220, Chem 3430.

CHEM 5610 Biochemistry (LEC 3.0)
A resume of the important aspects of quantitative and physical chemistry in biochemical processes. General subjects covered include: proteins, nucleic acids, enzymes, carbohydrates and lipids. Credit may not be given for both Chem 5610 and Chem 4610. Prerequisite: Chem 2220.

CHEM 5619 Biochemistry Laboratory (LAB 2.0)
Experiments are integrated with the lectures and cover the chemical and physical properties of proteins, enzymes, nucleic acids, carbohydrates and lipids. Credit may not be given for both Chem 5619 and Chem 4619. Prerequisites: Preceded or accompanied by Chem 5610 and Chem 1100 or an equivalent training program approved by S&T.

CHEM 5620 Biochemical Metabolism (LEC 3.0)
A continuation of Chem 5610. Catabolism and anabolism of carbohydrates, lipids, proteins, and nucleic acids. Photosynthesis, oxidative phosphorylation and membranes. Credit may not be given for both Chem 5620 and Chem 4620. Prerequisite: Chem 4610 or 5610.

CHEM 5630 Biochemical Nanotechnology (LEC 3.0)
This course will educate on the interdisciplinary areas of bio-nanotechnology. Student will investigate the potential of nanoscience in advanced applications including DNA/protein nanotechnology, drug delivery, environmental biosensor and emerging biotechnology industries. Credit may not be given for both Chem 5630 and Chem 4630. Prerequisite: At least junior standing.

CHEM 5640 Neurochemistry with Clinical Correlations (LEC 3.0)
This course explores the chemical underpinnings of neurological phenomena. It covers the overall structure and function of neurons and glial cells, neurotransmission, signal transduction, and metabolism. A central focus of the course is relating these topics to processes such as learning and memory, as well as various pathological states. Prerequisites: Chem 4610.

CHEM 5710 Environmental Monitoring (LEC 3.0)
This course provides an overview of environmental monitoring methodologies. Discussion covers thermodynamic and kinetic processes that affect chemical transport and fate in the environment. Federal environmental regulations and remediation technologies are also covered with specific examples. Credit may not be given for both Chem 5710 and Chem 4710. Prerequisites: Chem 2210, Physics 2111.

CHEM 5810 Introduction to Polymeric Materials (LEC 3.0)
A basic study of the organic chemistry of natural and synthetic high polymers, their inherent properties and their uses in plastic, fiber, rubber, resin, food, paper and soap industries. Credit may not be given for both Chem 5810 and Chem 4810. Prerequisite: Chem 1320 or Met Eng 1210. (Co-listed with MS&E 5810).
CHEM 5850 Introduction to Coating Chemistry (LEC 3.0)
Study of the basic principles of protective coatings with particular reference to the paint and varnish industry. Classifications, manufacture, properties and uses of protective coatings. Credit may not be given for both Chem 5850 and Chem 4850. Prerequisite: Chem 1320 or Met Eng 1210. (Co-listed with MS&E 5850).

CHEM 6000 Special Problems (IND 0.0-6.0)
Problems or reading on specific subjects or projects in the department. Consent of instructor required.

CHEM 6001 Special Topics (IND 0.0 and LEC 0.0 and LAB 0.0)
This course is designed to give the department an opportunity to test a new course. Variable title.

CHEM 6010 Seminar (RSD 1.0)
Discussion of current topics.

CHEM 6020 Polymer Synthesis and Characterization Lab (LAB 1.0)
Laboratory experiments dealing with polymerization syntheses and solution, bulk and solid properties will be presented. Each student will prepare polymers and carry out all characterization experiments on actual samples. Credit may not be given for both Chem 5819 and Chem 4819. Prerequisite: Chem 4810 or MS&E 4810 or Chem 5810 or MS&E 5810 or Chem Eng 5310, preceded or accompanied by Chem 1100 or Chem 5100 or an equivalent training program approved by S&T. (Co-listed with MS&E 5819).

CHEM 6025 Advanced Synthetic Organic Chemistry (LEC 3.0)
A discussion of a large number of synthetically useful reactions involving enolates and enamines; nucleophilic additions to carbonyl compounds; functional group interconversions, thermal pericyclic reactions; organometallic compounds; carbocations, carbenes and free radicals as reactive intermediates; aromatic substitutions; and multistep synthesis. Prerequisite: Chem 4210 or Chem 4220.

CHEM 6240 Physical Organic Chemistry (LEC 3.0)
An advanced course in theoretical organic chemistry treating molecular orbital theory, free energy relationships, transition state theory, and other fundamental topics. Prerequisite: Chem 4210.

CHEM 6250 Spectrometric Identification of Organic Compounds (LEC 3.0)
Overview of MS and IR techniques in the characterization of organic compounds; CD/ORD; 1H, 13C, and heteronuclear NMR spectroscopy in the structural analysis; applications of APT, DEPT, 1H-1H COSY, HETCOR, HMOC, HMBC, INADEQUATE, TOCSY, NOE AND NOESY, and dynamic NMR. Prerequisite: Chem 2220.

CHEM 6320 Solid State Chemistry (LEC 3.0)
The aim of this course is to build a comprehensive understanding of the chemistry of solids and its application to the materials world. Emphasis will be given on the synthesis, crystal structure and various properties of solids including electrical, optical and magnetic. Students will gain knowledge about how to correlate a property with structure. Prerequisites: Chem 2310, Chem 2320, and Chem 3410.

CHEM 6330 Nanomaterials Synthesis, Properties and Applications (LEC 3.0)
Chemistry of nanomaterials. Understanding the fundamentals of nanoscience and technology. Studying the different synthesis strategies for nanomaterials and their characterization. Understanding the properties of nanomaterials and their possible applications. Introducing the concept for device fabrication. Prerequisite: Chem 4310.

CHEM 6340 Physical Organic Chemistry (LEC 3.0)
Prerequisite: Chem 4220.

CHEM 6350 X-ray Crystallography (LAB 2.0 and LEC 2.0)
Molecular and crystal structure determination by single crystal x-ray diffraction methods. Brief coverage of relation to neutron and electron diffraction.

CHEM 6360 Bioinorganic Chemistry (LEC 3.0)
Metallobiomolecules, including metalloenzymes and other metalloproteins; oxygen carriers; iron transport and other iron proteins; copper proteins; cancer agents and cures; nitrogen-fixation, etc. Prerequisite: Chem 4310.

CHEM 6380 Inorganic Materials Chemistry (LEC 3.0)
Chemical processing of solid materials. Introduction to point groups, space groups, and x-ray diffraction. Bonding in solids - from molecular orbital theory to band theory. Nonstoichiometric materials and Kroger-Vink notation. Optical and electrical properties of semiconductors. Epitaxial growth. Quantum effects in nanophase materials. Prerequisite: Chem 4310 or permission of instructor.
<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 6420</td>
<td>Quantum Chemistry I</td>
<td>3.0</td>
<td>A rigorous introduction to the fundamental concepts and principles of quantum chemistry. Application to translational, vibrational, and rotational motion; one-electron systems. Prerequisite: Chem 3420 or equivalent.</td>
</tr>
<tr>
<td>CHEM 6430</td>
<td>Chemical Kinetics</td>
<td>3.0</td>
<td>An introduction to the deduction of mechanisms of homogeneous chemical reactions from rate-data. Selected topics, such as photochemistry, free-radical mechanisms, catalysis, and explosion reactions. Prerequisite: Chem 3430.</td>
</tr>
<tr>
<td>CHEM 6450</td>
<td>Spectroscopy</td>
<td>3.0</td>
<td>Introduction to the interaction of electromagnetic radiation with matter. Emphasis on the ultraviolet, visible, and radio portions of the spectrum. Prerequisite: Chem 3420 or equivalent.</td>
</tr>
<tr>
<td>CHEM 6460</td>
<td>Advanced Molecular Engineering of Materials</td>
<td>3.0</td>
<td>This advanced course focuses on the fundamentals of molecular science and engineering and their applications including renewable/clean energy solutions, energy storage, and optoelectronics. Topics include principles of carbon chemistry, macromolecules, metal(covalent)-organic frameworks, sol-gel processing, crystal growth and other advanced topics. Prerequisites: Graduate Standing or consent of instructor. (Co-listed with MS&amp;E 6460).</td>
</tr>
<tr>
<td>CHEM 6480</td>
<td>Physical Chemistry Of Surfaces</td>
<td>3.0</td>
<td>Adsorption at liquid interfaces and properties of surface films. Physical and chemical adsorption on solid surfaces. Catalysis.</td>
</tr>
<tr>
<td>CHEM 6510</td>
<td>Separations</td>
<td>3.0</td>
<td>An in-depth study of all types of analytical and preparativescale separations. A special emphasis will be placed on chromatography and chromatographic theory. Prerequisite: Chem 4510 or equivalent.</td>
</tr>
<tr>
<td>CHEM 6550</td>
<td>Chemical Spectroscopy</td>
<td>3.0</td>
<td>A study of the electronic, vibrational, rotational and nuclear magnetic resonance spectra of atoms and molecules. A basic understanding of the underlying theoretical principles and the interpretations of results is stressed. Prerequisite: Chem 4510, Chem 3420 or equivalent courses.</td>
</tr>
<tr>
<td>CHEM 6555</td>
<td>Principles And Applications Of Mass Spectrometry</td>
<td>3.0</td>
<td>The course covers fundamental physical principles of mass spectrometry, instrumentation, interpretation of spectra, and applications in environmental, polymer, biomedical, and forensic fields. Prerequisite: Chem 4510 or equivalent.</td>
</tr>
<tr>
<td>CHEM 6570</td>
<td>Electrochemistry</td>
<td>3.0</td>
<td>Introduction to the fundamentals, methods and applications of electrochemistry. Fundamentals cover the thermodynamics/kinetics of electrode reactions, and the modes of mass transport in the electrolyte. Methods cover potentiometric, amperometric, and a.c. techniques. Applications focus on analysis and study of materials. Prerequisite: Chem 3430.</td>
</tr>
<tr>
<td>CHEM 6580</td>
<td>Mass Spectrometry of Macromolecules</td>
<td>3.0</td>
<td>This course will provide an overview of mass spectrometric applications in biomacromolecules and synthetic polymers; particular areas of emphasis are proteomics, genomics, pharmaceutical screening, characterization of biochemical complexes and synthetic polymers. Prerequisite: Chem 4510 or equivalent.</td>
</tr>
<tr>
<td>CHEM 6620</td>
<td>Intermediary Metabolism And Biosynthesis</td>
<td>3.0</td>
<td>The course covers the biosynthesis and metabolism of nucleic acids, carbohydrates, lipids and proteins. Prerequisite: Chem 4620.</td>
</tr>
<tr>
<td>CHEM 6650</td>
<td>Free Radicals In Biochemistry</td>
<td>3.0</td>
<td>The study of the basic principles of free radical chemistry and biochemistry. Prerequisites: Chem 2210, Chem 2220 and Bio Sci 2113.</td>
</tr>
<tr>
<td>CHEM 6820</td>
<td>Polymer Synthesis</td>
<td>3.0</td>
<td>The methods of organic monomer and polymer syntheses will be explored. Mechanistic and structural components, modern and current industrial methods for polymer syntheses will be discussed. Topics include linear, branched, graft, and dendritic polymers, nano-technology and macromers. Prerequisites: Chem 4810 or MS&amp;E 4810 or Chem 5810 or MS&amp;E 5810; Chem 2220 or Chem 4210 or Chem 4220 or Chem 5220 or Chem 5220. (Co-listed with MS&amp;E 6820).</td>
</tr>
<tr>
<td>CHEM 6840</td>
<td>Polymer Physical Chemistry and Analysis</td>
<td>3.0</td>
<td>A study of the physical properties of macromolecular systems including polymer solutions, gels, bulk polymers and rubbers. The chemical characterization of polymers based on their thermal, spectroscopic, microstructure and molecular weight is also discussed. Prerequisite: Chem 4810 or MS&amp;E 4810 or Chem 5810 or MS&amp;E 5810; thermodynamics. (Co-listed with MS&amp;E 6840).</td>
</tr>
